Taylor Smith
(210) 417-2200 | smith.tas22@gmail.com | in/smithtas | github.com/tsmith422

EDUCATION

Texas A&M University, College Station, Texas **December 2026**
Bachelor of Science in Computer Science, Minors in Mathematics and Japanese GPA: 3.867

SKILLS

Python | C++ | JavaScript | SQL | React | PostgreSQL | RESTful APIs
Git | Linux/Unix | Software Design | Agile Development

RELEVANT COURSEWORK

- Software Engineering (CSCE 431)
- Foundations of Software Engineering (CSCE 331)
- Artificial Intelligence (CSCE 420)

TECHNICAL PROJECTS

Member Management Web Application, Ruby on Rails | PostgreSQL **Fall 2025**

- Collaborated in a five-person Agile team to design and develop a full-stack web application for the Texas A&M Singing Cadets.
- Implemented backend services and database models to manage member information and organizational workflows.
- Participated in sprint planning, code reviews, and collaborative feature development.
- Designed RESTful endpoints enabling efficient data retrieval and updates.

Data Acquisition GUI, Python **Fall 2025**

- Built a GUI system to control oscilloscopes and collect experimental data remotely.
- Worked directly with external stakeholders to deliver production-ready features.
- Implemented structured data handling and documentation for future developers.

Heuristic Search & Logic Solvers, C++ **Fall 2025**

- Engineered an A* Search algorithm with custom heuristics to solve complex state-space problems (Blocks World), optimizing for path efficiency and memory usage.
- Developed a DPLL-based SAT Solver to process Boolean formulas in CNF, implementing recursive backtracking and unit propagation.
- Applied rigorous debugging and software design patterns to ensure algorithmic correctness and performance on large datasets.

Restaurant Point-of-Sale System, React | PostgreSQL | REST API **Fall 2024**

- Constructed a full-stack POS system supporting order processing and menu management.
- Built frontend components using React syntax to create responsive user interfaces.
- Modeled a PostgreSQL database schema and implemented RESTful API communication between frontend and backend.

LEADERSHIP & SERVICE

Officer, Ambassador, & Lead Developer, TEASO **Summer 2024 – Present**

- Launched a Python automation bot integrating Discord and Google Sheets APIs to streamline member verification and onboarding.
- Coordinated technical solutions improving communication and organizational efficiency.
- Supported incoming engineering students as an ambassador and peer resource.
